

M SHAYAN KHAN

Full Stack Engineer | BS Computer Science, FAST NUCES

kshayan7268@gmail.com | +92-336-5210712 | [Linkedin\shayan-khan](#) | [GitHub](#) | Rawalpindi, Pakistan

SUMMARY

Full-stack developer and Computer Science student with hands-on experience across web development, backend systems, and applied AI/ML — including production full-stack apps, an AI-integrated document classification backend, and computer-vision projects. Comfortable working across the stack, from frontend interfaces to database design to model training.

TECHNICAL SKILLS

Programming Languages: C++, C, Python, Assembly, Java, HTML, CSS, JavaScript, SQL, React, Tailwind CSS, MySQL

Frameworks & Tools: Git, Linux, Jupyter Notebook, Anaconda, VS Code, Visual Studio, Sublime Text, SQL Server, Firebase, Supabase, Docker

Libraries: pandas, NumPy, SciPy, matplotlib, scikit-learn, OpenCV, TensorFlow, PyTorch, Hugging Face Transformers, FastAPI, Flask, pymc3

EXPERIENCE

Software Intern - SPSNET (Islamabad, Pakistan)

Jul 2026 – Aug 2026

- Built an AI-based document classification system for government records, covering 88 official record series under the Library of Virginia GS-17 schedule.
- Developed the Node.js/Express backend using a strict layered architecture (route → controller → service → utility) for maintainability.
- Implemented a vector search pipeline with 768-dimensional embeddings and a Milvus/Zilliz vector database using cosine similarity.
- Integrated LLM-based classification (Llama 3.1) with RAG prompting, similarity gating, and a confidence-scoring system.
- Built a multi-format text extraction and OCR pipeline (PDF, DOCX, Excel) with selective page-level OCR to keep processing fast.

Full Stack Developer - The Fitness Lab (Remote, Rawalpindi)

Feb 2026

- Built a full-stack gym management system using React and Supabase.
- Implemented login, member registration/attendance/membership tracking, and payment logging.
- Built an analytics dashboard for business insights.

Freelance Web Developer - Naeem & Associates (Remote, Islamabad)

Oct 2025

- Built and customized a WordPress business website, including CMS features and business card designs.

Intern - Octans Digital (Islamabad)

Jul 2024

- Built a Helmet Detection system using Python and OpenCV, including custom dataset creation and model training/evaluation.

PROJECTS

Career-Connect - Job Application Portal — MySQL, Python

- Designed a relational database schema with role-based authentication and SQL queries using joins and aggregation.

Multi-threaded Real-Time Game Engine - C, OpenGL, POSIX Threads

- Built a Pac-Man clone using POSIX threads, with semaphores and mutexes for ghost AI synchronization.

EDUCATION

BS Computer Science - FAST NUCES, Islamabad

Aug 2021 – Present
